

Evil Twin Phishing

Free Wi-Fi isn't free from hackers.

Hackers set up fake Wi-Fi networks that look legitimate to steal your data, passwords and financial details, connecting to these networks can lead to identity theft or account compromise.

- Use a VPN when connecting to public Wi-Fi
- Prefer networks that require a password over completely open ones
- Don't access banking or sensitive accounts on public Wi-Fi
- Never enter personal information on unsecured networks
