

IOT Devices

IF IT'S SMART, IT NEEDS PROTECTION TOO

Smart devices like cameras, speakers, and wearables make life easier — but they can also be entry points for hackers. Without proper security, these devices can expose your data, privacy, and home network to cyberattacks.

Smart Security Tips:

- Change default passwords
- Enable two-factor authentication
- Use a separate network for IoT devices
- Update firmware regularly
- Disable unused features

**SECURE YOUR SMART DEVICES,
SECURE YOUR WORLD.**
